#### PERSONAL ASSISTANCE FOR SENIORS WHO ARE SELF-RELIANT

#### 1. INTRODUCTION

### 1.1 Project Overview

Sometimes elderly people forget to take their medicine at the correct time. They also forget which medicine He / She should take at that particular time. And it is difficult for doctors/caretakers to monitor the patients around the clock. To avoid this problem, this medicine reminder system is developed. An Online web application is developed through which the caretaker can update the medication details and timing. There is a Backend to store all the medication details and time. And comes the use of an IoT device which receives the medication name at the desired time. Then the use of Text To Speech service to speak out the medicine name through the IoT device after receiving it from the web application.

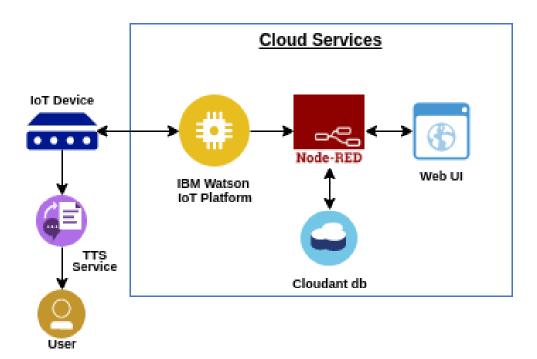

Fig 1.1.1 Technology architecture

The following cloud services are as follows,

- 1. IBM Watson IoT Platform
- 2. Node-RED Service
- 3. Cloudant DB
- 4. TTS Service

Need to have basic knowledge on the above mentioned cloud services.

### 1.2 Purpose

All of us have a busy hectic schedule. Today's life is full of responsibilities and stress. So people are prone to diseases of different types and it is our duty to make ourselves stay fit and healthy. If the patient stays at home then he or she might get someone to look after him/her but when one is not at home, is out of the city or state away from home then it is hard for the family members to call them and remind them their dosage timings every time.

In our developing and technology dependent life we totally rely on gadgets especially smartphones. With this we get an opportunity to use technology in a better way so that it can be made useful to us. And it plays an important part in our daily life and helps us staying fit in many ways. The remarkable problem is that patients forget to take the proper medicines in proper proportion and in proper time. Medication adherence, which refers to the degree or extent to which a patient takes the right medication at the right time according to a doctor's prescription, has recently emerged as a serious issue because many studies have reported that non-adherence may critically affect the patient, thereby raising medical costs. So our objective is to give reminder to the self reliant people about their medications. The patients can leave taking medicines to just our app. Whenever the time for the medicine is up, they will be notified and they only have to take their prescriptions during that time, and no other time. If implemented properly, this will drastically decrease overdose of medicines due to forgetfulness and the patients will also be reminded to take their medicines

### 2. LITERATURE SURVEY

### 2.1 Existing problem

Some people find it difficult to learn new apps in this ever-expanding digital environment, and people nowadays tend to forget things more easily, such as taking their prescriptions. People need a way to remember to take their prescriptions without having to learn how to use sophisticated programs. Furthermore, some patients are so occupied with their day-to-day activities that they just forget to take their medications.

This is particularly true for old patients who have to take more than one medicine at more than one time in a day. Setting alarm clocks is a tedious task which patients are too lazy to set again and again. If asked about what time people have to take their medicines, many forget to answer the correct times or remember whether they have already taken the medicine in the day already

Elder people specially face this problem because of their degrading memory and in severe cases, forget that they have already taken their prescription and retake the same medicine 2 or 3 times in the same duration. This may not be harmful for lighter medicines, but for some strong and concentrated medicines, it can have further harmful effects to the body. This is exactly where our medicine reminder system can help. Our system takes up the prescription details from the user such as the duration of the prescription, the names of the medicines, the times they are to be taken and the amount of each medicine which is to be taken.

Thus the solution for the above mentioned problem is the MEDICATION REMINDER for the PEOPLE WHO ARE SELF RELIANT. It can help the users to take their prescribed medications at right time.

#### 2.3 Problem Statement Definition

Aging cannot be prevented and old age is a sensitive phase. But we can learn how to deal with arising conditions for great health of our loved ones. Elderly people need care and comfort to lead a healthy life without worries and anxiety. We cannot completely divert them from worrying but we can take care of them properly by providing proper medicines at the correct time. Sometimes elderly people forget to take their medicine at the correct time. They also forget which medicine he / she should take at that particular time. And it is difficult for doctors/caretakers to monitor the patients around the clock.

To avoid this problem, this medicine reminder system is developed. An application is built for the user (caretaker) which enables him / her to set the desired time and medicine. These details will be stored in the cloud database. If the medicine time arrives the web application will send the medicine name to the IoT Device through the IoT platform. The device will receive the medicine name and notify the user with voice commands. By providing an intimation like this, we can take care of the health of the elderly people by making them to take the right medicines at the right time.

The main aim is to ensure that the IoT-Based Smart Medicine Reminder Device will be solving problems faced by the elderly. The issues that have been identified are targeted very much to the elderly and are aimed to solve the issues faced by the elderly on a daily basis, especially with the consumption of medicine. This application was designed for the appropriate medication administration including time and dosages through: recording patient and medication data; scheduling patients' medication; and reporting medication administration on progress.

## 3. IDEATION AND PROPOSED SOLUTION

Fig 3.1 Medication reminder

## 3.1 Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It is a useful tool to helps teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

## 3.2 Ideation and Brainstorming:

Ideation is often closely related to the practice of brainstorming, a specific technique that is utilized to generate new ideas. A principal difference between ideation and brainstorming is that ideation is commonly more thought of as being an individual pursuit, while brainstorming is almost always a group activity. Brainstorming is usually conducted by getting a group of people together to come up with either general new ideas or ideas for solving a specific problem or dealing with a specific situation.

# 3.3 Proposed Solution:

|            | S.NO | PARAMETER                | DESCRIPTION   |
|------------|------|--------------------------|---|
|            |      | <b>Problem Statement</b> | Aging cannot be prevented and old age is a sensitive phase.   |
|            |      | (Problem to be           | Sometimes elderly people forget to take their medicine at     |
|            |      | solved)                  | the correct time. They also forget which medicine He / She    |
|            | 1    |                          | should take at that particular time. And it is difficult for  |
|            |      |                          | doctors/caretakers to monitor the patients around the clock.  |
|            |      |                          | An application need to be built for the users which enables   |
|            |      |                          | them to set the desired time to take medicines.               |
|            |      | Idea / Solution          | The user details will be stored in the cloud database. If the |
|            |      | description              | medicine time arrives the web application will send the       |
| <b>ት</b> + | 2    |                          | medicine name to the IoT Device through the IoT platform.     |
|            |      |                          | The device will receive the medicine name and notify the      |
|            |      |                          | user with voice commands                                      |
|            |      | Novelty /                | The use of Text To Speech service to speak out the            |
|            | 3    | Uniqueness               | medicine name through the IoT device after receiving it       |
|            |      |                          | from the web application makes this app unique from other     |
|            |      |                          | existing apps   |
|            |      | Social Impact /          | This app is a medication intake reminder system for people    |
|            |      | Customer                 | who are self-reliant. Using this app the user can avoid       |
|            | 4    | Satisfaction             | health issues that arise due to improper consumption of       |
|            |      |                          | medications. This app is flexible for illiterates too as it   |
|            |      |                          | provides voice services.                                      |
|            |      | Business Model           | The app revenue model is an integral part of a business       |
|            | 5    | (Revenue Model)          | concept. Many users may show willingness to this app as it    |
|            |      |                          | replaces the role of high paid caretakers. And also it can be |
|            |      |                          | easily used.  |
|            |      | Scalability of the       | Since it is a cloud based IoT application, it serves a large  |
|            | 6    | Solution                 | number of users which makes the application highly            |
|            |      |                          | reliable. Hence, it will have high scalability                |

**Table 3.3.1 Proposed solution table** 

## 3.4 Problem Solution fit:

The problem-solution fit is when you-

- 1. **Validate that the problem exists:** When you validate your problem hypothesis using real-world data and feedback. That is, you gather information from real users to determine whether or not they care about the pain point you're trying to solve.
- 2. **Validate that your solution solves the problem:** When you validate that the target audience appreciates the value your solution delivers to them.

The problem-solution fit precedes the product development and forms the foundation upon which a company is built. It helps you answer the basics startup-related questions before you even start your startup.

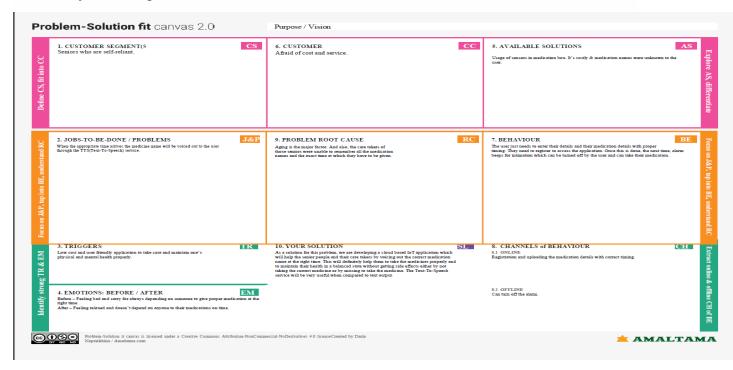

Fig 3.4.1 Problem-solution fit

# 4. REQUIREMENT ANALYSIS:

# **4.1 Functional requirement:**

| FR NO. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task)   |
|--------|-------------------------------|--|
| FR-1   | User Registration             | Registration through Form<br>Registration through Gmail  |
| FR-2   | User Confirmation             | Confirmation via Email Confirmation via OTP  |
| FR-3   | Access Cloud services         | Access the cloud service with correct credentials Store the details in the database Retrieve needed information for the user's operation |
| FR-4   | IOT configuration             | Fine Tuning the IOT device based on preference Access the Cloud DB via device Manage the request and response effectively                |

**Table 4.1.1 Functional requirements** 

# **4.2 Non-Functional requirements**

| FR NO. | Non functional requirement | Description  |
|--------|----------------------------|--|
| NFR-1  | Usability                  | App can be used by anyone who has operational knowledge about internet and computer. |
| NFR-2  | Security                   | For security, TFA is enabled and biometrics are also added for user safety           |
| NFR-3  | Reliability                | Highly reliable since, It uses Trusted cloud services like IBM                       |
| NFR-4  | Performance                | Performance is better compared to other market products.                             |
| NFR-5  | Availability               | Available on mobile app. Web version is getting ready for next release               |

**Table 4.2.1 Non-functional requirements** 

## 5. PROJECT DESIGN

## **5.1 Data Flow Diagrams**

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

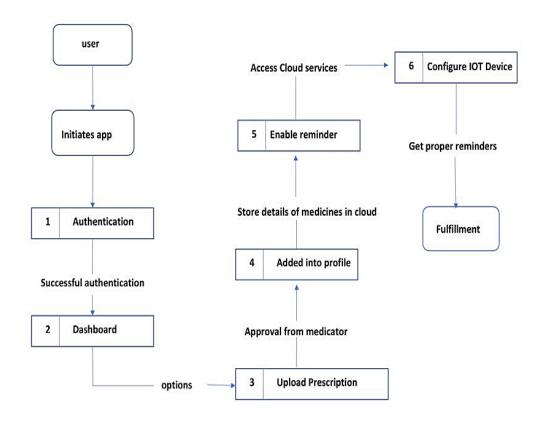

Fig 5.1.1 Data flow diagram

#### **5.2 Solution & Technical Architecture**

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions.

#### **GOALS:**

- 1. Find the best tech solution to solve existing business problems.
- 2. Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- 3. Define features, development phases, and solution requirements.
- 4. Provide specifications according to which the solution is defined, managed, and delivered.

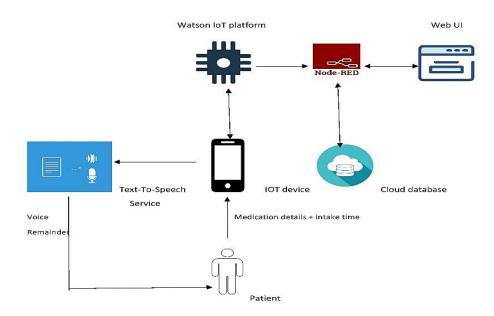

Fig 5.2.1 Solution architecture

**Technical architecture**—which is also often referred to as application architecture, IT architecture, business architecture, etc.—refers to creating a structured software solution that will meet the business needs and expectations while providing a strong technical plan for the growth of the software application through its lifetime. IT architecture is equally important to the business team and the information technology team. Technical architecture includes the major components of the system, their relationships, and the contracts that define the interactions between the components. The goal of technical architects is to achieve all the business needs with an application that is optimized for both performance and security.

The Deliverable shall include the architectural diagram as below and the information as per the table 1 & table 2

Reference: https://ieeexplore.ieee.org/document/9640866

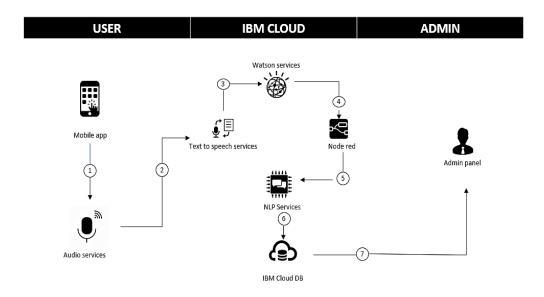

Fig 5.2.2 Technical architecture

## **5.3 User Stories**

A user story is an informal, general explanation of a software feature written from the perspective of the end user. Its purpose is to articulate how a software feature will provide value to the customer. User stories are one of the core components of an agile program. They help provide a user-focused framework for daily work — which drives collaboration, creativity, and a better product overall.

| User Type     | Functional<br>Requirement | User<br>Story | User Story / Task  | Acceptance<br>criteria  | Priority | Release  |
|---------------|---------------------------|---------------|--------------------|-------------------------|----------|----------|
|               | (Epic)                    | Number        |                    |                         |          |          |
| Customer      | Registration              | USN-1         | As a user, I can   | I can register          | High     | Sprint-1 |
| (App          |                           |               | register for the   | myself to use the       |          |          |
| user)         |                           |               | application by     | application             |          |          |
|               |                           |               | entering my email, |                         |          |          |
|               |                           |               | password, and      |                         |          |          |
|               |                           |               | confirming my      |                         |          |          |
|               |                           |               | password.          |                         |          |          |

## 6. PROJECT PLANNING & SCHEDULING

## **6.1 Sprint Planning & Estimation**

What are the steps in sprint planning?

- 1. Examine team availability.
- 2. Establish velocity for your team.
- 3. Plan your sprint planning meeting.
- 4. Start with the big picture.
- 5. Present new updates, feedback, and issues.
- 6. Confirm team velocity and capacity.
- 7. Go over backlog items.
- 8. Determine task ownership.

| Sprint   | Functional<br>Requirement<br>(Epic) | User Story<br>Number | User Story / Task   | <b>Story Points</b>                                 | Priority | Team Members  |
|----------|-------------------------------------|----------------------|---|---|----------|---------------|
| Sprint-1 | Registration                        | USN-1                | As a user, I can register for<br>the application by entering<br>my email, password, and<br>confirmingmy password. | the application by entering my email, password, and |          | Nandhini      |
| Sprint-1 |                                     | USN-2                | As an admin, I can create a database to store the user details.   | 8   | HIgh     | Priyadharshan |
| Sprint-1 |                                     | USN-3                | As an admin, I can able to view the user details from database  | 2   | Medium   | Nihila        |
| Sprint-1 | Login                               | USN-4                | As a user, I can log into the application by entering email & password  | 5   | High     | Priyadharshan |
| Sprint-2 | Dashboard                           | USN-5                | As an admin, I can create UI and form to collect medication details.  | 5   | High     | Srithy        |
| Sprint-2 |                                     | USN-6                | As a user, I can upload the medicine names, time and date.  | 5   | High     | Priyadharshan |

| Sprint-2 | Admin Panel | USN-7  | As an admin I can create a separate cloudant database to store medication details.   | latabase to |        | Priyadharshan |
|----------|-------------|--------|--|-------------|--------|---------------|
| Sprint-2 |             | USN-8  | As an admin I can view the medication details that were stored in the cloudant db.   | 2           | Low    | Nihila        |
| Sprint-3 |             | USN-9  | As an admin, I need write a time comparison function.  | 13          | High   | Priyadharshan |
| Sprint-3 |             | USN-10 | As an admin, I need to create to Watson IoT Text to Speech Service (TTS) to voice out the medication name at the appropriate time. | 5           | High   | Nihila        |
| Sprint-4 | Dashboard   | USN-11 | As a user, I will be able to view the consultant details suggested by the application.   | 5           | Medium | Srithy        |
| Sprint-4 | Admin panel | USN-12 | As an admin, I need to develop a python script to connect Watson IoT.  | 13          | High   | Priyadharshan |
| Sprint-4 | Dashboard   | USN-13 | As a user, I can able to view the food recommended by the application.   | 2           | Low    | Nandhini      |

#### 7 CODING AND SOLUTIONING

#### **7.1 Feature 1**

## **Medication details storage:**

The main aim of our application to get the medication details from user and store them in our cloudant database. The home page contains this medication details form. All these data will get stored in the "medications" database.

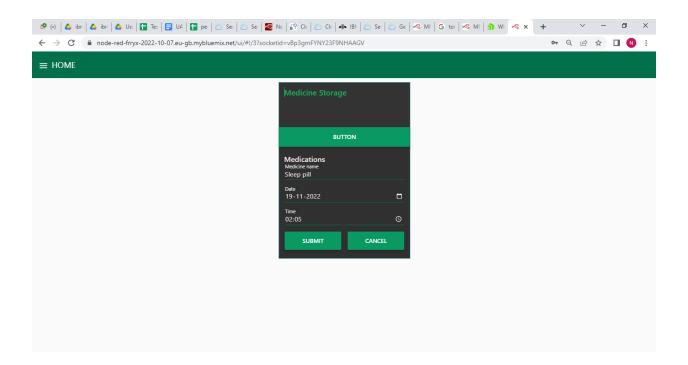

Fig 7.1.1 -Medication details form

## 7.2 Feature 2

#### Consultants information and food recommendation:

This feature is an add-on to our application. In the Medication Intimator web application all the users will be able to view the consultants page and food recommendation page. In the consultants tab some of the consultants from few different fields will be available. And in the What to eat tab, food will be recommended to the users in general with some specifications.

### 7.3 Database Schema

We used two databases to store the details that we get from the users

Database - "newusers" is used to store the details of new users.

Database - "medications" is used to store the medication details entered by the users.

The details entered by the users will get stored in the json format in both the databases.

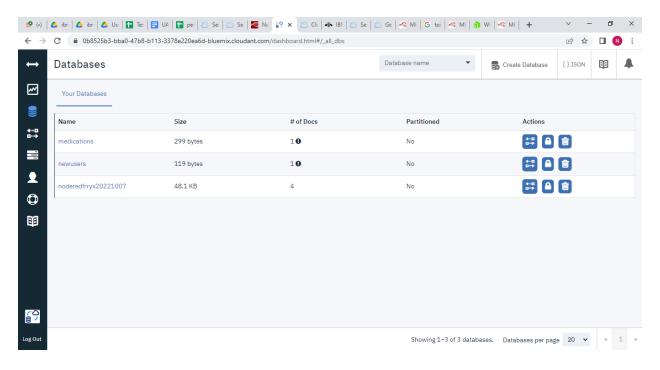

Fig 7.3.1 Database schema

# **8.2 User Acceptance Testing**

# 1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the [ProductName] project at the time of the release to User Acceptance Testing (UAT).

## 2. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

| Resolution     | Severity 1 | Severity 2 | Severity 3 | Severity 4 | Subtotal |
|----------------|------------|------------|------------|------------|----------|
| By Design      | 10         | 4          | 2          | 3          | 20       |
| Duplicate      | 1          | 0          | 3          | 0          | 4        |
| External       | 2          | 3          | 0          | 1          | 6        |
| Fixed          | 11         | 2          | 4          | 20         | 37       |
| Not Reproduced | 0          | 0          | 1          | 0          | 1        |
| Skipped        | 0          | 0          | 1          | 1          | 2        |
| Won't Fix      | 0          | 5          | 2          | 1          | 8        |
| Totals         | 24         | 14         | 13         | 26         | 77       |

**Table 8.2.1 Defect analysis** 

# 3. Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested

Not Tested Section **Total Cases** Fail Pass Print Engine Client Application Security Outsource Shipping Exception Reporting Final Report Output Version Control 

**Table 8.2.2 Testcase analysis** 

### 9. RESULTS

This medication reminder system serves reliable reminders, has a good and easy to use user interface and supports a lot of features adhering to medicines. The details are not at all confusing and can be easily understood by the user. The best part of the application is that the details only have to be entered one time. On submitting the details once, the data is synced on all the user's devices on which he/she is logged in. This allows for easy reminders no matter what device the user is using. The reviews on the system are overall positive and it addresses most of the flaws in the current reminder systems.

# 9.1 PERFORMANCE METRICS

#### **NFT Risk Assessment**

| Project name   | Scope/  | Functional | Hardware   | Software | Impact   | Load/  | Risk score |
|----------------|---------|------------|------------|----------|----------|--------|------------|

Table 9.1.3 - End of test report

#### 10. ADVANTAGES AND DISADVANTAGES

#### Advantages

- 1. When setting up medication reminders, users can customize their schedule. For example, users can set reminders for morning medications at a later weekends than on weekdays.
- 2. This medication reminder system is simple and easy to use.
- 3. With this app, even illiterates can use the available features and can take their medications at the right time due to text to speech service.
- 4. An unlimited number of medication reminders
- 5. Flexible scheduling for daily, weekly, or monthly dosa

#### **Disadvantages**

- 1. The user updates the medicines to be taken while using this medication reminder app, but the limitation is only single medicine detail can be uploaded as of now.
  - 2.Registration notification cannot be sent to the user

#### 11. CONCLUSION

The medication reminder system is a useful resource for those who need technological help in completing or need help in working through day-to-day tasks and taking care of their health. It is a smart and organized system that is designed to help the elderly people in our homes, but we have not put any restrictions that stop an everyday user from using the system. Anyone can need medical attention and normal people forget to take their prescriptions as well. The system will help them out in regulating their medications. It can also help a working person with a busy schedule by sending him a notification on the device he uses full day, his laptop. Thus there is no restriction on the user base for our system.

### 12. FUTURE SCOPE

For future work we have decided to add a confirmation from the user whether they have taken the medicine or not. If they haven't taken the medicine the information will be sent to the doctor and he can reschedule the further medicine reminders according to the new schedule. Overall, this is a much needed system by the elderly people in our homes. It helps them in taking their medications in the prescribed quantity and at the prescribed time.
